CERAMIC, OUR MATERIAL OF CHOICE

Ceramic is made from a blend of fine clay particles, natural aluminosilicate minerals, silica and kaolin. Its production involves a process of compression, printing and firing at temperatures exceeding 1,000°C. This process gives the material exceptional strength and excellent resistance to wear, scratches, heat and deformation.

Akante offers a wide range of ceramic tabletops, available in 3 to 6 mm ceramic bonded to 6 to 8 mm glass, or in 11 mm full-body ceramic. Crafted from large slabs measuring up to 1.60 m × 3.20 m, each tabletop is unique thanks to the way it is cut from the material.

Most of our ceramics are produced in Spain, with certain finishes exclusive to the brand, such as Light Oak, Silver and Titanium. The collection stands out with more than 17 finishes featuring a variety of effects: marble-inspired, glossy or matte, as well as stone, travertine and wood looks, such as Light Oak. Marble-effect finishes faithfully reproduce the natural veining of marble, while stone-inspired décors such as Cremona, Breccia and Patagonia offer a remarkably realistic mineral appearance. These tabletops enhance coffee tables, dining tables and side tables, as well as consoles, desks and sideboards.

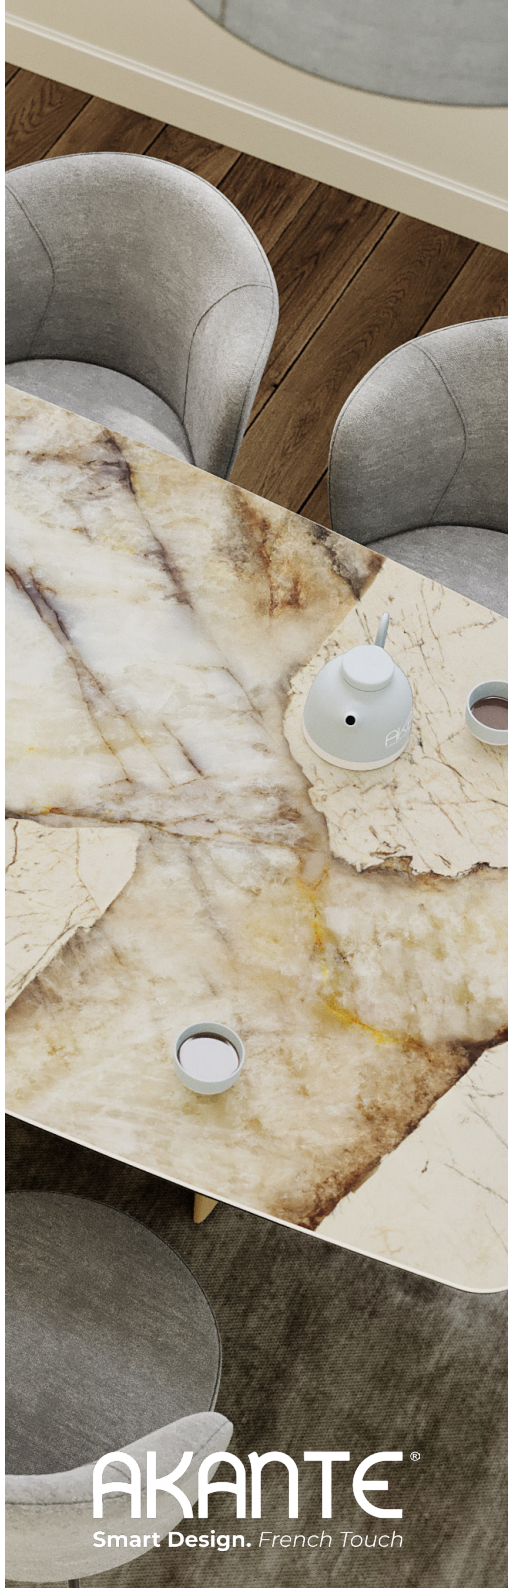
A VERIFIED ENVIRONMENTAL DECLARATION



Heat-resistant

Having already withstood extreme heat during its creation, ceramic offers excellent heat resistance. You can safely place hot pots and pans on the surface without any risk of damage.

Chemical-resistant

Unaffected by the chemical agents found in cleaning products, solvents, disinfectants and detergents.

Eco-friendly and recyclable

100% natural, ceramic does not release any substances that are harmful to the environment. It is also recyclable.

Durable

Ceramic is a durable material that ensures superior product quality for at least 10 years thanks to its exceptional resistance.

Natural

The surface does not release any harmful substances and prevents the growth of bacteria, making it completely safe for food contact.

Abrasion and scratch-resistant

Its hardness makes it highly resistant to wear and scratches, even after years of intensive use (with the exception of glossy ceramic finishes).

Easy to clean

Our tabletops do not require any special cleaning products for maintenance.

Long-lasting colours

The colour resists UV rays and retains its appearance even in the harshest weather conditions.
